

Terraform installation steps -Windows:

1. Launch windows powershell in administrator mode
2. Install chocolaty if it does not exists.

```
Set-ExecutionPolicy Bypass -Scope Process -Force; `
[System.Net.ServicePointManager]::SecurityProtocol =
[System.Net.ServicePointManager]::SecurityProtocol -bor 3072; `
iex ((New-Object
System.Net.WebClient).DownloadString('https://community.chocolatey.org/ins
tall.ps1'))
```

3. choco install terraform -y
4. Open Visual Studio and install terraform official plugin:

5. create a directory for Terraform and create main.tf file there:

6. Terraform Commands:

- a. **terraform init** - Initializes the Terraform working directory by downloading required provider plugins.
- b. **terraform plan** - Shows the changes Terraform will make before applying them.
- c. **terraform apply** - Creates or updates infrastructure based on the Terraform configuration.
- d. **terraform destroy** - Deletes all resources defined in the Terraform configuration.

7. Can launch a powershell terminal inside the VS code and execute these commands.

The screenshot shows a Visual Studio Code editor with a Terraform configuration file named `main.tf` and a PowerShell terminal window below it.

Terraform Configuration (main.tf):

```
1 provider "aws" {
2
3
4   region = "us-east-2"
5 }
6
7 resource "aws_instance" "ourfirst" {
8   ami           = "ami-0cb91c7de36eed2cb"
9   instance_type = "t2.micro"
10 }
11
```

Terminal Output:

```
PS C:\devops\Terraform> terraform plan

Terraform used the selected providers to generate the following execution plan. Resource actions are indicated with the following symbols:
+ create

Terraform will perform the following actions:

# aws_instance.ourfirst will be created
+ resource "aws_instance" "ourfirst" {
  + ami               = "ami-04b4f1a9cf54c11d0"
  + arn               = (known after apply)
  + associate_public_ip_address = (known after apply)
  + availability_zone  = (known after apply)
  + cpu_core_count     = (known after apply)
  + cpu_threads_per_core = (known after apply)
  + disable_api_stop    = (known after apply)
  + disable_api_termination = (known after apply)
  + ebs_optimized      = (known after apply)
  + enable_primary_ipv6 = (known after apply)
  + get_password_data   = false
  + host_id            = (known after apply)
}
```

The terminal window title is "powershell" and the status bar at the bottom indicates "Ln 11, Col 1 | Spaces: 4 | UTF-8 | CRLF | {} Terraform".
